OVERVIEW

At Prime Essential, we are a proven provider of field verification and as-built drafting. Our teams are assembled based on each client's needs, professional education and experiences to ensure the successful completion of projects. Our team consists of all levels of drafting designers and use the CAD Software that clients require. Since 2008, we are unrelenting in providing deliverables **done right, the first time and every time.**

TRANSPARENCY AND COOPERATION

Unlike many who offer drafting services, we are located downtown Calgary and allow our clients to make regular visits or we can come to you, to discuss project timelines and goals. It is our belief that increasing cooperation yields a lasting product. Similarly, our experienced project managers have coordinated projects of varying sizes with great success.

Field Verification

As facilities modernize, organizations require updates and revisions. Our professional field technicians offer a wealth of experience in addition to the latest safety training and protective equipment. Our approach is "line by line" for the highest accuracy while understanding client expectations to deliver a cost-effective product of great value; let us do the walking.

As-Built & Redline Updates

Our services have played an integral role in the completion of many engineering projects including HAZOPs. Using the latest drafting software, our designers bring your concepts to paper and help you quantify the conceptual. In addition, our efficiency ensures that revisions are promptly addressed. Our customer-focused expertise is offered at competitive rates.

Deliverables include: ▶ Plot Plans ▶ Piping & Instrumentation Diagrams ▶ Electrical Drawings

Field Schematics

Our designers are trained to use AbaData software and map out any pipeline information line by line. Whether it is updating existing schematic package or creating a new schematic program, we will satisfy the need to create and maintain up-to-date schematics.

Drawing Maintenance & Document Control

Accurate document control ensures the success of all projects. Our team prides itself on adhering to company-specific standards to guarantee that files are submitted promptly and correctly. Moreover, our expertise in drawing maintenance ensures that additional documentation such as drawing indexes and transmittal forms align with completed items; eliminating the need for checking upon receipt.
