OVERVIEW

At Prime Essential we are a proven provider of Oil & Gas Pipeline system audits. We help our clients in satisfying audit requirements and meeting regulations by OCC, AER, MER, and CER (NEB). Our auditors will review your documents and records, assessing compliance with CSAZ662:19. All our audits are conducted to ISO 19001 guidelines while providing arm's length 3rd party compliance verification.

GENERAL COMPLIANCE AUDITS

We conduct general compliance audits to verify that pipeline owners are meeting their own documented processes and procedures.

PROGRAM AUDITS

We conduct program audits to determine the level of compliance with legal requirements including CSAZ662, pipeline regulations, and owner's corporate requirements.

SPECIALTY / TECHNICAL AUDITS

We provide specialty/technical audits for specific owner user programs. These audits are conducted by subject matter experts due to the specialized nature of the programs.

AUDIT PROGRAM DEVELOPMENT

We develop audit programs for pipeline owners. Our approach is cost-effective for pipeline owners by focusing on high-risk items that can be streamlined for smaller annual audits as opposed to large 3-year audits.

LEAD AUDITOR QUALIFICATIONS

Our lead auditor has 20 + years of experience in the Western Canadian Oil & Gas market with 10 + years specifically associated with compliance auditing. He is a Certified Lead Auditor of Quality Management Systems ISO 9001, Certified Engineering Technologist (ASET), and certified Project Manager.

DIFFERENTIATORS

Unlike many other service providers, we work with our clients to develop a fit for purpose audit plans including schedules and deliverables. In addition, we recommend a risk-based approach to audits with a focus on legal requirements such as "shall, must or will" statements as opposed to burdensome and unnecessary requirements.
